

Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

JIRA-BASED SCRUM PROJECT

Automated Rubric Assignment Evaluator

Project Key: ARA

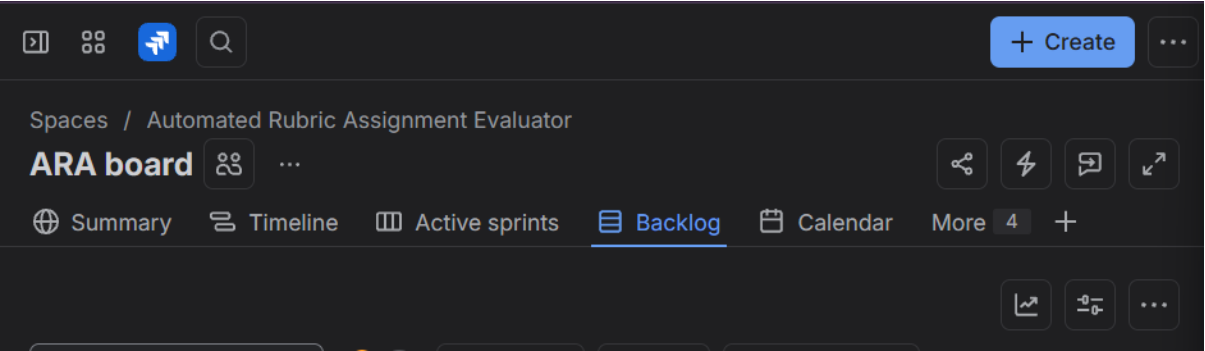

NAME: ROTTELA HARITEJ

SRN: PES1UG24AM231

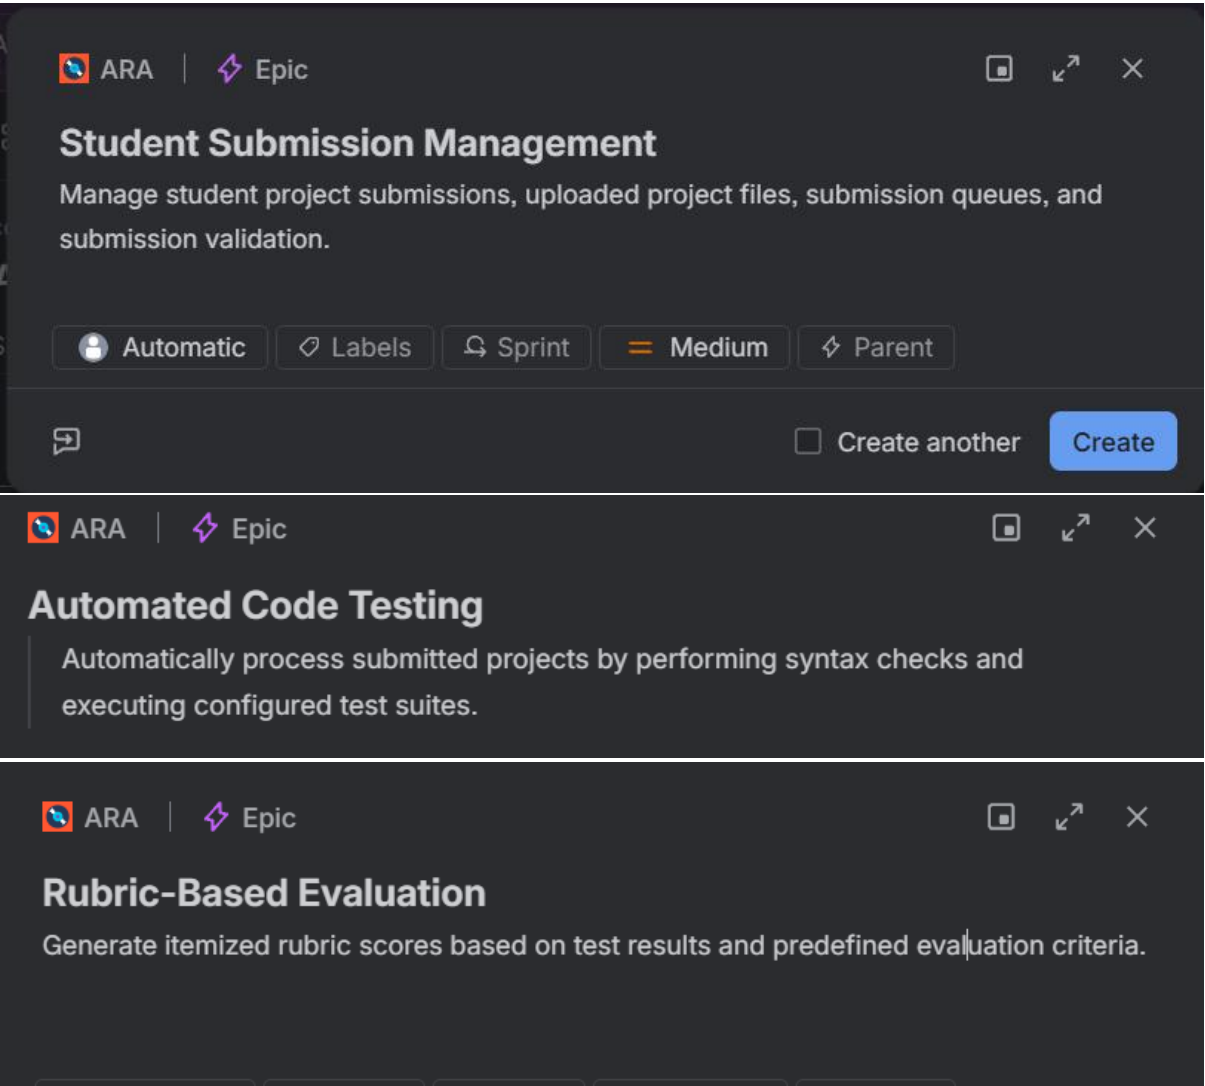

Epic / User Stories	As a	I want to	So that
Epic 1: Student Submission Management			
Description: Manage student project submissions, uploaded project files, submission queues, and submission validation.			
Story 1.1: Upload Project Submission	As a Student	I want to upload my project ZIP file	So that I can submit my project for automated evaluation
Story 1.2: Validate Project Submission	As a Faculty Evaluator	I want the system to validate uploaded project submissions	So that invalid submissions can be identified before evaluation
Epic 2: Automated Code Testing			
Description: Process submitted projects by performing syntax checks and executing configured test suites.			
Story 2.1: Syntax Validation	As a Faculty Evaluator	I want the system to check submitted code for syntax errors	So that invalid code can be identified before testing
Story 2.2: Execute Test Suite	As a Faculty Evaluator	I want the system to execute pre-configured unit test suites	So that the submitted project can be automatically evaluated
Epic 3: Rubric-Based Evaluation			
Description: Generate itemized rubric scores based on test results and predefined evaluation criteria.			
Story 3.1: Generate Rubric Score	As a Faculty Evaluator	I want the system to generate an itemized rubric score breakdown	So that I can evaluate submissions consistently
Story 3.2: View Test Results	As a Faculty Evaluator	I want to view test results along with rubric scores	So that I can understand the evaluation
Epic 4: Peer Review & Evaluation Management			

Description: Assign peer reviews and manage evaluation results.			
Story 4.1: Assign Peer Review	As a Faculty Evaluator	I want the system to assign peer reviews	So that submissions can be distributed without manual assignment
Story 4.2: View Evaluation Results	As a Faculty Evaluator	I want to view completed evaluation results	So that I can monitor the outcome of submissions and reviews

Burndown Chart

How to read this chart

6. Group Reflection

6.1 Objective

The objective of this activity was to implement **Agile Scrum practices using Jira** for the **Automated Rubric Assignment Evaluator** project. The group created and organized Epics and User Stories, assigned Story Points, prioritized the backlog, planned and executed Sprint 1 and Sprint 2, and tracked the progress of work items through different stages. The activity also helped us understand how Jira can be used for sprint planning, task tracking, progress monitoring, and Scrum reporting.

6.2 What We Did Well

- Successfully created and organized the required **Epics and User Stories** for the Automated Rubric Assignment Evaluator.
- Assigned appropriate **Story Points** to the user stories based on their estimated complexity.
- Prioritized the backlog according to the importance of the system functionalities.

- Created and managed **Sprint 1 and Sprint 2** using Jira.
- Practiced moving work items through **To Do, In Progress, and Done** statuses.
- Added comments to Jira work items to record implementation and testing progress.
- Used Jira reports to monitor sprint progress and analyze completed work.
- Successfully completed the planned work items across the sprints.

6.3 Challenges Faced

- Understanding Jira's backlog, sprint, and project-management features initially required some practice.
- Deciding suitable Story Point values for different user stories required discussion among the group members.
- Managing priorities and organizing user stories between the two sprints required coordination.
- Understanding how sprint progress is represented through Jira reports, particularly the **Sprint Burndown Chart**, required some learning.
- Ensuring that the user stories and sprint activities remained aligned with the **Automated Rubric Assignment Evaluator** problem statement was an important consideration.

6.4 What We Learned

Through this activity, we learned how **Agile Scrum methodology can be practically implemented using Jira**. We understood the importance of creating a well-structured product backlog, breaking project requirements into Epics and User Stories, estimating work using Story Points, prioritizing tasks, and planning work across sprints.

We also learned how Jira can be used to track the progress of individual work items, communicate progress through comments, and analyze sprint performance using reports such as the **Burndown Chart**.

6.5 Improvements for Future Sprints

- Improve Story Point estimation through better discussion and planning.
- Assign specific work items to individual team members to improve accountability.
- Complete work progressively throughout the sprint instead of completing tasks near the sprint deadline.
- Add more detailed progress comments and updates to Jira work items.
- Review the Burndown Chart regularly to identify delays and take corrective action.
- Improve sprint planning by considering task dependencies and workload before assigning stories to a sprint.

6.6 Conclusion

The group successfully completed the Jira-based Scrum activity for the **Automated Rubric Assignment Evaluator** project. The activity provided practical experience in backlog management, Epic and User Story creation, Story Point estimation, prioritization, sprint planning, task tracking, and progress monitoring. It also improved our understanding of how Agile Scrum practices can be applied to manage the development of a software project effectively.
